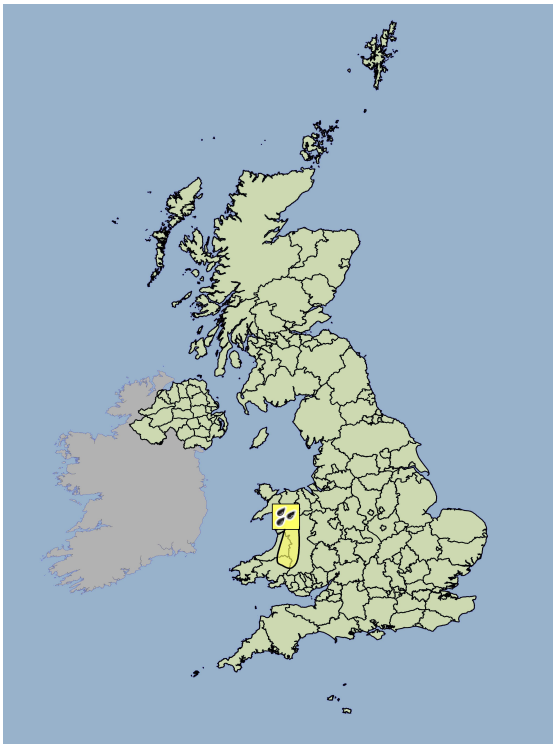
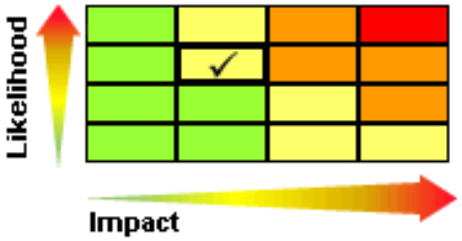
National Severe Weather Warning Service





Chief Forecasters Assessment
An active frontal system will move eastwards across Wales on Tuesday night bringing heavy rain. This will be followed by a strong, moist westerly flow which will last through Wednesday and Thursday. Further spells of heavy rain are likely as the moist air is lifted up over the high ground. Rainfall totals of 30-50 mm are likely in places.

There remains some uncertainty regarding the timing of the periods of heavier rainfall and this warning may be updated and possibly extended into Thursday as new information becomes available.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **00:05 on Wed, 17th Dec 2014** until **23:55 on Wed, 17th Dec 2014**

Rain will become heavy and persistent across parts of western and central Wales on Tuesday evening and last for much of Wednesday. The heaviest of the rain is likely during the early hours of Wednesday with another increase in rainfall intensity possible during the second half of the day.

The public should be aware of the risk of local flooding.
